Plugin Manual

Dry Preview

Version: 1.0

Dry Preview is a simple plugin which boost up your productivity with just one click by enabling you to preview all of your changes in editor immediately.

Thank You :)

Thanks for purchasing our plugin. We really appreciate your support and trust in us. We worked hard to make this plugin easy to use as much as possible. Hopefully, you will enjoy using it.
Have fun!

How To Install?

Via WordPress Install:

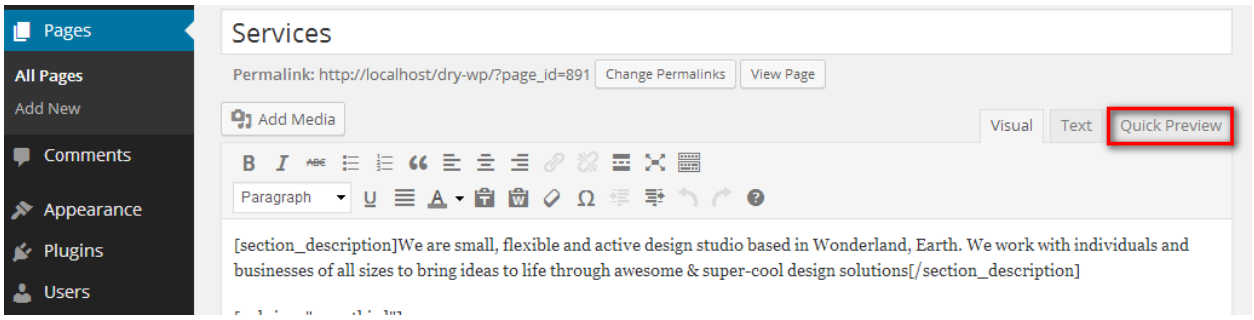
1. In WordPress administration, open Plugins -> Add New
2. Switch from Search to Upload on the top of the page
3. Browse to the plugin package zip on your computer
4. Click Install Now button
5. Activate plugin Dry Preview from WordPress admin Plugins panel.

Via FTP:

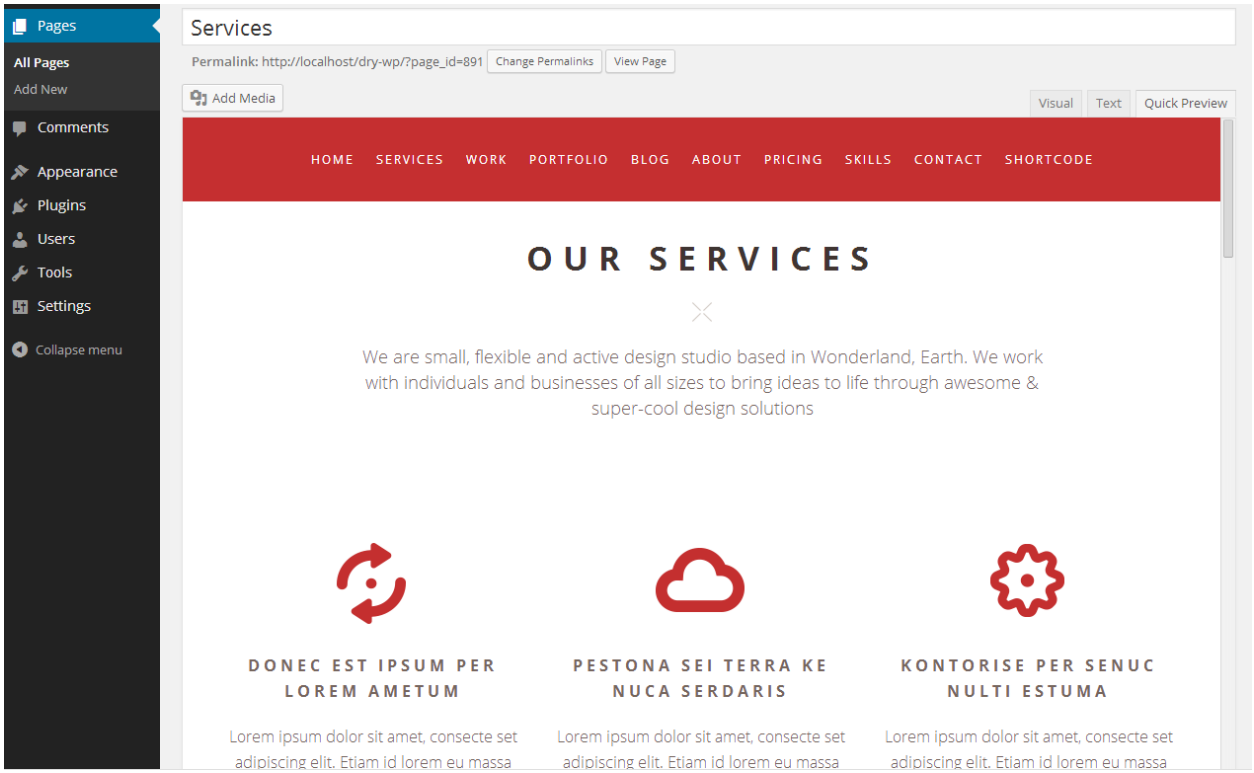
1. Unpack this archive.
2. Upload dry-preview folder to your website wp-content/plugins folder.
3. Activate plugin Dry Preview from WordPress admin Plugins panel.

How to Use?

After you have installed plugin all you need to do is to open some Page/Post and in top-right corner of WP Editor you will see one extra tab called **“Quick Preview”**



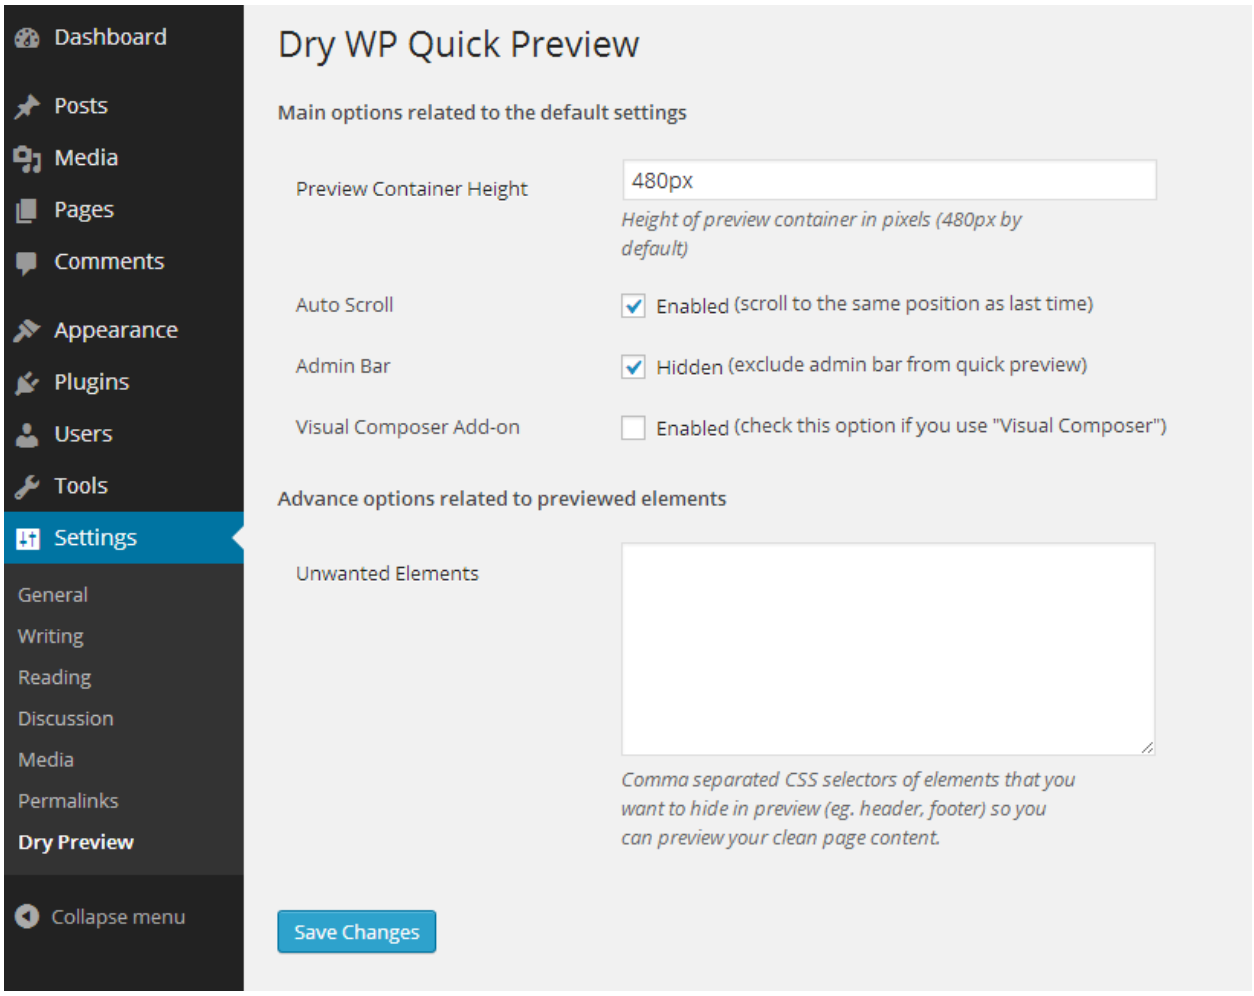
When you click on “Quick Preview” tab all of your content from visual mode is transformed in content which show how your page really looks on your site. For example, our code from visual mode is transformed into this:



After making any changes in visual/text tab you can see how that will fit into your live page just by switching between “Visual” and “Quick Preview” tab.

Dry Preview Settings

There are some basic settings for plugin placed in Dashboard > Settings > Dry Preview. It looks like this:



- Preview Container Height - here you can set how big will “Quick Preview” tab will be

- Auto Scroll - this options allows you to “remember” position in “Quick Preview” tab (scroll to the same position as last time). If you disable this options, your page will always start from start/top in “Quick Preview”

- Admin Bar - hide admin bar in “Quick Preview” tab

- Visual Composer Add-on - check this options if you use “Visual Composer” plugin and you will get “Quick Preview” button optimized for “Visual Composer”

- Unwanted Elements - Comma separated CSS selectors of elements that you want to hide in “Quick Preview” tab (eg. header, footer, #menu, .widget) so you can preview your clean page content.

Need Support?

We tried to help you out with this documentation. So please read carefully. If we fail here please visit our profile on Code Canyon and be free to ask. Our developers will try to solve your issue ASAP.
Be advised that we do not provide support for larger modifications.
We also do not provide support via email.
Thanks for understanding.
